## BULLETIN:

- **Bangladesh:** Setting up Fisheries Economic Zone to boost exports.
- **China:** Seafood exporters to embrace new export strategy fearing currency depreciation.
- **Kiribati:** Study on seafood access to strengthen food security.

## FROZEN FISH:

- Mackerel supplies has been reduced overtime following over exploitation of fishing areas. In 2023, exports of whole frozen mackerel decreased, whilst imports increased marginally compared to 2022.

## CHILLED AND FROZEN TUNA:

- Business in the high value tuna trade was good in Japan during the Spring festival in April and May. Three million foreign tourists contributed to brisk sales at the HORECA sector.
- In the USA, good demand for fresh tuna keeps the sashimi trade strong but demand has weakened for frozen tuna fillet and steaks.
- Canned tuna packers in Asia and Europe increased raw material imports during January-March 2024. Skipjack price bottomed out in April at US\$ 1 300/MT.

## SHRIMP

- Hydroelectric power shortage affected shrimp farming and exports in Ecuador. Aquaculture production in Asia was low in April.
- Imports of shrimp during January-March 2024 declined in China and Europe but improved marginally in the USA and in Japan.
- Demand for fresh shrimp has been steady for Southeast Asian retail and restaurant trade.

## Canned Fish

- The European Union (EU) common market for processed and canned tuna was dormant in 2023.

## FACT SHEET:

- Republic of Korea Fishery Trade (Fishery Imports) 2019-2023

All **indicative** prices refer mainly to the period: **11/3/2024 – 20/3/2024**.

**Bangladesh     SETTING UP FISHERIES ECONOMIC ZONES TO BOOST EXPORTS**

Federation of Bangladesh Chamber of Commerce and Industry (FBCCI) Standing Committee on Fisheries Sector identify exporting fisheries products (shrimp, crab, freshwater and marine fish) as having a huge potential to boost foreign exchange earnings. FBCCI President said that Bangladesh used to earn a lot by exporting fisheries products, however because of the rise of domestic demand fish exports have declined. Therefore, the fisheries sector traders are seeking policy support from the government, including establishment of two fisheries economic zones (for fish farming) to increase production and supply of fish for the domestic market and exports. According to the business leaders, the area allocation for fish farming using cage culture system in the river (in cooperation with the government) will increase fish production significantly.

**China             SEAFOOD EXPORTERS TO EMBRACE NEW EXPORT STRATEGY FEARING CURRENCY DEPRECIATION**

Renminbi is currently at a six-year low against the US dollar and still expecting to further devalue. The weak currency is worrying Chinese seafood exporters forcing them to make new export strategy to at least isolate them from weaker domestic currency. Some of the companies which funds are kept overseas in foreign currency can offer lower prices to seafood importers for them to have an increase sales volume and take a bigger market share. According to a chief executive through *SeafoodSource*, a weaker Renminbi means Chinese exporters' operating costs are much lower relative to their sales prices and therefore can afford to lower their prices based on their sales currency which is in dollar. Weak Renminbi is an advantage for western companies which are processing their seafood in China as they are paying less (in a weakening currency) and selling it in a much stronger currency. However, for Chinese processors who are buying raw materials in dollars, a weaker Renminbi is a financial disadvantage and for Chinese consumers, imports become more expensive.

**Kiribati            STUDY ON SEAFOOD ACCESS TO STRENGTHEN FOOD SECURITY**

A study on "Characterizing pathways of seafood access in small-island developing states" was conducted to determine the pathways through which locals in the small Pacific Island nation of Kiribati access seafood. It has revealed that the primary mechanism which locals access their seafood is through general market. However, it was found that the highest seafood consumption to which households access their seafood was through non-market channels like producing seafood at home and sharing seafood as a gift which is often related to kinship ties and religious statues. Therefore, the study found improving telecommunication networks and enhancing inter-island transportation as key to strengthening food security across Kiribati, with easy access to seafood to prioritise. In addition, the study revealed consumption patterns linked to access of seafood where high-consumption male-dominated households often rely on home production, while female-dominated households typically rely on purchasing and gifting to access seafood. Wealthy households with high levels of seafood consumption, on the other hand, consumed more pelagic fish, while less well-off households focused more on lagoon, sand, flat, and reef fish. It was found, that different household strategies were also associated with different patterns of seafood consumption. Following the study outcome, it was further identified that specific resource management approaches and policy avenues for the government to strengthen food security based on consumer trends, can be identified.

**Asia** Asian markets for fresh/chilled Atlantic salmon have a total of 10% market share from the total global imports (1 825 600 MT). In 2023, total imports of fresh/chilled Atlantic salmon in Asia increased by 10.6% at 180 809 MT in volume and 7.4% at US\$ 2 267 350 in value compared to the previous year. Among the main markets in Asia, increases in China and Saudi Arabia compensated for the overall decrease recorded in almost all other Asian countries.

China continues to dominate the Asian market with 80 127 MT, an 81.8% increase in import volume, with a 44% market share in Asia and 4.4% globally. The increase in seafood imports in China particularly for fresh/chilled Atlantic salmon was due to the strong consumer demand for high-value products. The opening of more sales channels following the end of zero-COVID policies, and especially in the restaurant sector which was the key outlet for fresh fish products, also aided in the increased seafood imports in China. Although, in the later part of 2023, there were records of poor sales and a declining consumption of salmon in China, including access supplies causing price drops in the market; the salmon market only began to gradually recover again in mid-December 2023 (*Source: Globefish Highlights 1/2024*).

Republic of Korea was in the top two followed by Thailand, Taiwan, and Hong Kong (which surpassed Japan at the top five) for the top five markets in Asia. Demand for high value seafood like salmon in other main markets in Asia is low compared to the previous year because of the price hike. Instead of fresh/chilled salmon products, some shifted their preference to frozen salmon products, which is much affordable.

In addition to Thailand, Vietnam, Singapore, Indonesia and Malaysia sales opportunity for fresh/chilled Atlantic salmon particularly Norwegian salmon is fast growing in the Philippines. In 2023, the Philippines recorded a 16% growth in imports of Norwegian salmon at 447 MT of in 2023 against the previous year.

In terms of supply, the top five main suppliers for fresh/chilled Atlantic salmon to Asia are Norway, Australia, Chile, Faroe Island and the UK. Norway dominated the Asian market with 72% market share, with a growth in exports by 5.7% at 130 121 MT in 2023 against 2022 with greater demand recorded for China. Among the main suppliers, increases were recorded (except for Faroe Island), particularly Chile with a 156.5% at 18 137 MT from 7 070 MT in 2022. The increased demand from China has been the major contributor in the growth of fresh/chilled salmon exports from Chile in Asia, taking into consideration the signed agreement of Chile with China to increase the export of aquaculture products, in line with a new protocol for inspection, quarantine and veterinary health requirements (*Source: Globefish Highlights 1/2024*).

# **FROZEN FISH & FILLET**

**INFOFISH Trade News, No. 5/2024**

**15 May 2024**

Prices in **US\$/kg** if not otherwise stated

Supplies of mackerel has been reduced over the years following the over exploitation of fishing areas. Particularly in the North Sea, where mackerel's Total Allowable Catch (TAC) of 739 387 MT have been agreed by the coastal States.  
*Source: Globefish Highlights 1/2024*

In 2023, **exports of whole frozen mackerel** decreased by 12.4% at 1.279 million MT compared to the 2022. Since 2021, decreases have been seen mainly because of the less supplies from the major exporters Norway and Japan. When compared to 2021, with Japan the second top exporter then, supplies have dropped significantly by 57.4% in 2023. In 2023, China became the leading exporter of whole frozen mackerel with a 31.8% growth surpassing Norway, whose exports dropped by 10.7%. Meanwhile, Korea (Republic of) had a major jump from top 6 in 2022 to top 3 in 2023. After a record of decreasing supplies from 2019-2021, it significantly increased by 118.5% and 221% in 2022 and 2023 respectively against 2021.

Indonesia, Philippines, Thailand, Vietnam, and Malaysia are the major market destinations of whole frozen mackerel from China following re-processing to canned products. As for Norway's bigger sized mackerels, Japan, Korea (Republic of) and China are the top importers for domestic consumption. Meanwhile the shift of imports of African markets went to Korea (Republic of) supplies, particularly Ghana, Cote d'Ivoire, and Nigeria, having small pelagic species as one of their major fish imports for domestic consumption.

**CHILLED & FROZEN TUNA**

1US\$ = JPY 155.38

**INFOFISH Trade News, No. 5/2024**

Prices in US\$/MT if not otherwise stated

**15 May 2024****Sashimi and non-canned tuna trade****Japan**

The *Golden Week* festival in Japan celebrated throughout the country from 27<sup>th</sup> April to 6<sup>th</sup> May this year, generated much demand for fresh and frozen high value tuna in the Japanese *sashimi* trade. Unlike the other years, the price hike of bluefin and oily bigeye tuna was nominal this year in the *sashimi* trade, creating additional seasonal demand in the restaurants and catering business. Reportedly, Japan received three million foreign tourists in March 2024. Demand for *sashimi* tuna increased significantly during March to May this year, that helped with reducing domestic inventories of the ultra-frozen tuna fillets in the wholesale trade.

The *Toyosu Fish market* in Tokyo was closed from 28 - 29 April and from 3 – 5 May in conjunction with the *Golden Week* celebrations. However, the *sashimi* tuna trade is now in the low consumption season which will continue until the summer holiday season begins in July. Generally, during this period (June) the consumption of raw fish including tuna, is reduced significantly in Japan because of the hot weather.

**USA**

In 2023, overall demand for non-canned tuna in the USA was impacted by low demand for non-*sashimi* grade tuna in the retail trade, resulted in a 23% fall in the annual imports of tuna fillet and steaks in comparison with 2022. However, good demand for fresh tuna persisted from the large number of Japanese restaurants in the USA and supported the high value tuna trade in this market. The US remained the top importer of fresh tuna prior and after the *COVID* pandemic.

**USA: Imports of fresh and frozen tuna, January-December 2019-2023, in MT**

**Raw materials for canning and other uses****Southeast  
Asia and  
Europe**

Global demand for frozen tuna raw material seemed to be improving since the first quarter of 2024, while frozen skipjack prices have bottomed out from May. In comparison with 2023, frozen tuna imports in Thailand were 20.7% higher at 221 645 MT during the first quarter of 2024. China imported 24 600 MT frozen tuna during this period in comparison with less than 10 000 MT imports a year ago. Tuna canners in Europe have started to import more raw materials, whole frozen and cooked loins from the first quarter of 2024.

The delivery price of frozen skipjack to Thailand from the Western and Central Pacific increased by US\$ 50/MT in May at US\$ 1350/MT. Frozen yellowfin prices in the Indian Ocean have been firm for a while in response to strong demand from European tuna canners.

**Japan**

In Japan, the ex-vessel prices of frozen skipjack and yellowfin at the Yaizu port are still weak as landings increased by 21% for skipjack at 28 460 MT and 41% for yellowfin at 4 088 MT during the first four months in 2024. Lower catches of albacore are keeping its prices firm.

**FROZEN SHRIMP**

INFOFISH Trade News, No. 5/2024

15 May 2024

**FROZEN SHRIMP**

US\$ = JPY 155.38

**WORLD**

**Production and supply:** Farmed shrimp production slowed down in Ecuador linked with the prolonged El Niño and draught that led to a 60-day state of emergency from mid-April followed by power rationing.

In Asia, the first harvest of new season's farmed shrimp took place in April and did not show much increase in comparison with last year, which was affected by low market prices worldwide.

In 2023, black tiger shrimp production had a real 'come back' at 500 000 MT and held 10% share in Asia's farmed shrimp production at over 500 000 MT. China was the lead producer (180 000 - 200 000 MT), followed by Vietnam (153 000 MT), India and Indonesia (50 000 MT each) and Bangladesh (70 000 MT).

Meanwhile, the revised data on 2023 farmed shrimp production in China showed significant rise at 1.8 million MT contributed by the greenhouse aquaculture sector. This supply source in China is likely to continue in 2024.

**Imports in 2024**

**China:** With less than three percent decline in total supply, China remained the top importer of shrimp during January-March 2024. In comparison with 2023, imports were lower but remained above the 2022 and 2021 levels.

China: Shrimp Imports from leading suppliers, January-March 2023-2024, in MT			
Origin	2023	2024	% change 2024/2023
Ecuador	292 248	275 383	-5.7
India	153 430	142 605	-7.0

<b>Total (including others)</b>	<b>258 042</b>	<b>251 037</b>	<b>-2.7</b>

**USA/Canada:** Imports in North America improved during the first quarter of 2024 against the same period in 2023. The drop in US imports reversed but marginally (+1.0%) at 182 863 MT; from this total, 50% was the popular raw peeled shrimp. Canada had a better score during this period at 12.3% rise in imports.

**Europe:** In the European Union, most markets are yet to show positive trends in imports, although there are indications of improved demand at the end consumers' level. Supplies of imported shrimp during the first quarter of 2024 fell below last year's in Spain, the Netherlands, Germany, Denmark, Italy, and increased marginally in France (+1.3%).

In Southeast Asia and Far East, cumulative imports recorded during January-March 2024 were positive in many markets associated with high demand during the Lunar New Year in February 2024. Notably, post New Year festival demand pattern remains moderate particularly for fresh head-on shrimp in the retail trade

## OUTLOOK

A modest growth is projected in the global shrimp trade in 2024, tempered by low prices and supply dynamics. Ecuador, the producer and exporter of farmed *vannamei* will continue to influence global supply and exports. However, the recent restriction on the country's power supply affected by the El Nino is likely to restrict aquaculture production and exports in Ecuador during May-June.

In Asia, overall production is expected to increase as the farming season continues until October/November; this will balance global supply and demand while any significant rise in ex-farm and export prices is doubtful.

In the international trade, all focus is on China where monthly imports in 2024 fell below last year's during first quarter of the year. The expected rise of China's local supply from the seasonal harvests, will be challenging to foreign shrimp suppliers in the coming months. For the rest in Oriental Asia, retail demand for fresh shrimp will continue to support businesses at firm prices.

In the USA, some resurgence in demand growth is probable but from a low point with a gradual recovery. The retail sector has played a key role in the slow rebound of market demand.

Demand recovery in Europe is linked with the catering and restaurant trade during the summer holiday months further influenced by the supply and market prices in the coming months.

INFOFISH <i>Trade News</i> , No. 5/2024 15 May 2024		LIVE, FRESH & FROZEN LOBSTER AND CRAB Prices in US\$/kg if not otherwise stated				1US\$ = HK\$ 7.82		
<b>Cuba/China</b> The country has consistently been exporting its high-quality lobsters in China. The Cuban lobster exports have established small yet solidify its presence to Chinese market following the continues ban of Australian lobster. Compared to lobster from Boston, Cuban lobsters are considered more premium as it is more expensive in China. During the Chinese New Year, one Cuban lobster was sold at US\$ 42 against Boston lobsters at US\$ 32.

**European Union Tuna**

The European Union, the world's largest market for canned and processed tuna, imported less in 2023 affected by the dormant consumer demand for ready-to-eat tuna products. In comparison with 2022, there was a 6% shortfall in imports of the HS 16014 product group at 633 430 MT, including cooked frozen tuna loins (168 320 MT). European tuna canners in Spain, Italy, France, and Portugal are the main users of cooked loins, for reprocessing higher value ready-to-eat products.

Following the overall demand trend in the EU market, imports from non-EU countries also declined by 5.7 % year-on-year at 429 732 MT including 166 400 MT of cooked loins. The leading suppliers were Ecuador, Papua New Guinea, Mauritius, Seychelles, the Philippines, and China.

European Union Imports of canned and processed tuna, January-December 2021-2023, in 1000 MT				
Source	2021	2022	2023	% change
Ecuador	132.02	128.44	124.35	-3.2
Spain	102.33	103.78	111.53	-7.7
Papua New Guinea	49.33	49.69	40.61	-18.4
Other countries	365.6	392.68	356.94	-9.1
<b>Total EU imports</b>	<b>649.28</b>	<b>674.6</b>	<b>633.43</b>	<b>-6.1</b>

Source: Eurostat

During the first quarter of 2024, demand for raw frozen tuna and cooked loins seemed to have improved from European canners, particularly for frozen yellowfin tuna, which is an indication of improved consumer demand in the EU during the forthcoming summer months.
